L6: Entry 2 of 2

File: USPT

Aug 29, 1995

DOCUMENT-IDENTIFIER: US 5446070 A

TITLE: Compositions and methods for topical administration of pharmaceutically active agents

Brief Summary Paragraph Right (9):

U.S. Pat. No. 4,937,078 to Mezei, et al. describes a liposome encapsulated local anesthetic or analgesic agent that is said to provide, when applied to the skin or mucous membrane, greater local anesthesia and analgesia than the same agents incorporated in conventional vehicles such as ointments, creams, or lotions. These liposomal films are preferably applied under occlusion.

Detailed Description Paragraph Type 0 (68):

ANTITHROMBOTIC such as Anagrelide, Argatroban, Cilostazol, Daltroban, Defibrotide, Enoxaparin, Fraxiparine.RTM., Indobufen, Lamoparan, Ozagrel, Picotamide, Plafibride, Tedelparin, Ticlopidine, Triflusal

L6: Entry 1 of 2

File: USPT

Jun 12, 2001

DOCUMENT-IDENTIFIER: US 6245782 B1

TITLE: Methods of inhibiting platelet activation with selective serotonin reuptake inhibitors

Detailed Description Paragraph Right (22):

For enteral or mucosal application (including via oral and nasal mucosa), particularly suitable are tablets, liquids, drops, suppositories or capsules. A syrup, elixir or the like can be used wherein a sweetened vehicle is employed. Liposomes, microspheres, and microcapsules are available and can be used.

Detailed Description Paragraph Right (83):

The balance between arterial wall prostacyclin production and platelet thromboxane synthesis directly influences vasoreactivity and thrombosis. Support for the relevance of measuring prostanoids during coronary events was found in a study demonstrating that coronary arteries produce large amounts of prostacyclin compared to the production of low quantities of thromboxane. Prostacyclin and its analogs (e.g. defibrotide) were shown to reduce tissue injury during myocardial ischemia. Early studies have found that thromboxane does not appear to be a mediator of reversible ischemia-reperfusion damage. However, recent observations have described beneficial cardioprotective properties of thromboxane receptor blockade, or thromboxane synthetase inhibition on recovery after acute coronary events.
